Home Winemaking Catalog / Revised 05/06/25

Company Background:

Gino Pinto LLC is a family operated business which was established in 1968 by Gino Pinto. Gino Pinto LLC imports wine-making equipment and supplies from Europe for distribution to its clientele here in the U.S. Gino Pinto LLC also sources wine making equipment from domestic manufacturers in the U.S. as well as distributes fresh wine grape and grape juice from our suppliers in the U.S., Chile, Italy, and South Africa. The company is located in Hammonton, New Jersey.

In June of 2021 Gino Pinto LLC merged with Wine & Beer Supply of Ashland, Virginia. This merger facilitates our expansion into other product lines such as beer and mobile services including bottling, filtration, reverse osmosis, canning, and kegging.

Oak Chips

Oak chips can add attractive oak flavors and aromas to wines. They are especially useful during red wine fermentations in stabilizing color and moderating overly vegetal characteristics. Oak chips may be added during or after fermentation. They can be added in loose form to red fermenters or suspended in tanks via immersible “soaking” bags. Recommended contact time varies according to particular applications, but full extraction will usually occur within 8 weeks. Rinse in hot water before use.

Bottle Fillers

Enolmatic / Electric Automatic Bottle Filler

The Enolmatic is the only vacuum filler coupling small size and easy operations with professional features and performance. Hourly filling rate is about 250 bottles per hour. This unit is the ideal equipment for filling wine. Other liquids such as oil, spirits, liquor, tomato sauce, and fruit juices, can also be filled with the proper additional kit. The filler is constructed of top quality food grade materials and is reliable. A carboy, barrel or demijohn can be placed below the Enolmatic filler for up to 13 feet (4 meters). The filler is practical and you can adjust the filling level just once and it remains as default value and you can adjust the filling speed. You can use the Enolmatic with bottle heights from 250 mm up to 330mm and inner neck diameters from 16mm to 28mm.

Campden Tablets, 2 oz (approximately 100 tablets).

Tablets used in winemaking to sanitize equipment and add free SO₂ to the must or wine. When crushed and dissolved, they provide sulfur dioxide (SO₂) in a convenient form. Tablets are made with Potassium Metabisulfite. Tablets must be crushed to use. For sanitizing bottles and other equipment, use two crushed tablets dissolved in 1 gallon of water. For adding to must, use one crushed and dissolved tablet per gallon of must and wait 12 hours before adding yeast. 1 tablet per gallon = 30 ppm SO₂.

Cat. No.: WA-CAMPDEN TABLETS 2OZ

Pectic Enzyme, 0.5 fluid oz.

A liquid that is added to crushed fruit to increase juice extraction. Also used during fermentation to eliminate pectin hazes. Pectic enzyme increases juice yields from fruits by breaking down cellular structure. Also acts as a clarifier, and is used to clear hazes caused by residual pectins. Use: Add 1/4 teaspoon per 6 US gallons of wine.

Cat. No.: WA-PECTIC ENZYME SOLUTION .50Z

Price: \$3.00

Potassium Metabisulfite, 1 pound.

Potassium Metabisulfite is a common wine or must additive, in which it forms sulfur dioxide gas (SO₂). This both prevents most wild microorganisms from growing, and it acts as a potent antioxidant, protecting both the color and delicate flavors of wine. It can be used for sanitizing equipment and the must from which wine is to be made.

Cat. No.: WA-POTASSIUM METABISULFITE 1LB

Price: \$6.00

Potassium Sorbate, 1 oz.

Potassium Sorbate is a wine stabilizer that should be used in conjunction with Campden or its active ingredient, Potassium Metabisulfite. In other words, it works better with sulfites present than without, and it works better than sulfites alone. Potassium Sorbate disrupts the reproductive cycle of yeast. Yeasts present are unable to reproduce and their population slowly diminishes through attrition. Potassium Sorbate is added in the amount of 1/2 teaspoon per gallon of wine. Sorbic Acid results and stabilizes the wine. Usually the crushed Campden and Potassium Sorbate are dissolved in a cup or two of the wine to be stabilized and stirred thoroughly. Allow the stirred wine to sit a few moments and look for small white lumps of undissolved powder. If present, continue stirring until the wine is clear without any undissolved lumps. This is then added to the larger batch and stirred in well with a sanitized glass rod or wooden dowel. Once a wine is stabilized it can be sweetened if desired.

Yeast D-47, 5 grams.

Recommended for making wines from white varieties such as Chardonnay and rosé wines. An excellent choice for producing mead, however be sure to supplement with yeast nutrients, especially usable nitrogen. An excellent choice for dry whites, blush wines and residual sugar wines.

Cat. No.: WA-YEAST-D47

Price: \$.95

Yeast EC-1118, 5 grams.

The EC-1118 strain is recommended for all types of wines, including sparkling, and late harvest wines and cider. It may also be used to restart stuck fermentations. An excellent choice for champagnes and late harvest wines. Also a very good choice for dry whites.

Cat. No.: WA-YEAST-EC-1118

Price: \$.95

Yeast K1V-1116, 5 grams.

The K1V-1116 strain tends to express the freshness of white grape varieties such as Sauvignon Blanc, Chenin Blanc and Seyval. The natural fresh fruit aromas are retained longer than with other standard yeast strains. Fruit wines and wines made from concentrates poor in nutrient balance benefit from the capacity of K1V-1116 to adapt to difficult fermentation conditions. Restarts stuck fermentations. Highly recommended for dry whites, aged reds, and late harvest wines.

Cat. No.: WA-YEAST-K1-V1116

Price: \$.95

Yeast RC-212, 5 grams.

RC 212 is recommended for red varieties where full extraction is desired. Lighter red varieties also benefit from the improved extraction while color stability is maintained throughout fermentation and aging. Aromas of ripe berry and fruit are emphasized while respecting pepper and spicy notes. An excellent choice for both young & aged red wines.

Cat. No.: WA-YEAST-RC212

Price: \$.95

Yeast 71B-1122, 5 grams.

The 71B-1122 is used primarily for young wines such as *vin nouveau* and has been found to be very suitable for ice wine, blush and residual sugar whites.
